

LCT Front loading machine series H

On base of the standard program the cleaning machines of the series H were produced with a vertical door opening (lift, folding, sliding door) and higher bath contents.

Therefore these machines offer the possibility to load very heavy washing goods as well as parts with a need for very large inner heights.

A trolley with extractable washing basket or a fixed frame are basic equipment, e. g. for crane loading.

The complete program of accessories as well as the customer specified requirements can be carried out inside of this machine series..

The cleaning machines of this series can be operated in the warm/watery area (series W) or in an special version also with cold cleaning agents/solvents (series K) or with an indirect heating for the use of a mixture of 20 % hydrocarbon and 80 % water.
